

Plant Simulation – Open Workshop

This is a very intensive and quick training method to address your problems. Here, we would collaboratively create solutions for your problems.

Day 1 (if necessary): Basic SimTalk training

Day 2-5: Your topics* – your agenda

How it works:

- You can define some high priority topics and an unlimited number of lower priority topics.
- All high priority topics and as much lower priority topics as possible will form the content of the workshop.
- You also can attend without defining topics. Then you can define your topics directly during the workshop.

This approach has a number of advantages:

- There is a clear focus on your areas of Plant Simulation.
- At the end you will have executable simulation models with unencrypted methods.
- In general, objects are created that can be used in other projects and greatly simplify their creation.

You should first gather some experience with Plant Simulation and SimTalk (for example in the form of basic training or self-study).

* except of VSM, GANTT and OPC

User Level:

all

Duration:

1-5 days

Costs:

On request

Training location:

On site in your country
